

## **SMART HEIGHT MEASUREMENT**

This height measuring device contains a sensor which is able to detect height. It is supposed to be placed at 200cm from the ground. When a student stands under the device, the sensor will detect the student's height digitally and immediately send the reading to the LED screen & using Bluetooth, the height will be displayed on the phone screen.

This digital height measuring device is produced to facilitate the recording of students' height during SEGAK assessments in school. It's quite a special tool as it's convenient, user-friendly and time-saving. Obviously, it really helps PE teachers during SEGAK assessments.
